Anyway How about creating profiles for production For example I have a montage of 100 items.. This allowed me to see how high the height differences were between the two surfaces.. These workflows can be further enhanced using ProjectWise and other products and services that leverage the power of i-models.. Anyway what about generating profiles for production For example I have an assembly of 100 items.. This weeks featured Gallery project comes from Eduardo Soethe and is a fantastic example of how InfraWorks shines for highway and local road design.

When defining box girders CSiBridge will automatically assign the drape locations within the tendon the engineer can edit them as well.. This allowed me to see what the elevation differences were between the two surfaces.. These workflows can be further enhanced with ProjectWise and other products and services that utilize Performance of I models.
